G.1 Terminology

Key terms used throughout this Report are defined in Table H.1

Table H.1 Terminology

Term	Definition
Action Area	The area encompassing the Project's MLs (ML90162, ML90163, ML90164, ML90165 and ML90166) as illustrated on Figure 1.1.
Continuing Activities	Activities detailed in Chapter 2 that will continue to be undertaken within areas that have been cleared over the course of 2024, 2025 and early 2026 under an early works and preparatory construction campaign. Alongside activities captured within the Stage 1 Referral, these activities are Critical Path Activities. Continuing Activities do not form part of the Stage 1 Referral Action.
Critical Path Activities	Activities that determine (in the context of the Project) the earliest achievable first copper concentrate production date. Delays to Critical Path Activities directly delay commissioning of the Project and production of concentrate for the Mount Isa smelter.
Excluded Activities	Activities associated with the Project that do not form part of the Stage 1 Referral Action
Disturbance Footprint	The maximum disturbance area necessary to undertake activities associated with the Stage 1 Referral Action, encompassing 696 ha, and extent of existing cleared areas, encompassing approximately 350 ha, as illustrated on Figure 1.2.
Project	The development and operation of the Eva Copper Mine Project in its entirety.
Stage 1 Referral Action	The action the subject of this referral, comprising the activities detailed in Chapter 3 which are a subset of the Project and that, alongside the Continuing Activities, are Critical Path Activities.
Stage 2 Referral	Activities detailed in Chapter 4 being the balance of the Life of Mine Plan for the Project beyond that described by the Stage 1 Referral, and the Continuing Activities and Excluded Activities. Stage 2 activities are critical for the viability and continuation of the Project.
